DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2, 4-9, and 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Baldwin, Jr. et al., U.S. Patent 6,280,563.

Baldwin, Jr. et al. shows the invention as claimed including an apparatus for plasma doping, comprising: a vacuum container 12 defining a chamber therein, the container having a portion made of a dielectric material such as quartz (see col. 7-lines 2-3) and bearing an impurity 56 to be doped in a substrate 11 provided in the chamber; and a plasma source (for example, 40) operable to generate a plasma in the chamber by forming an electric field through the portion of the container, so as to cause ion in the plasma to impinge against the portion of the container to draw the impurity out of the portion of the container into the chamber, wherein the impurity can comprise aluminum (see col. 11-lines 25-30 and fig. 1 and its description).

With respect to claims 2 and 9, note that the impurity 56 is deposited on a surface of the portion of the container.

Art Unit: 1763

Regarding claims 4 and 11, note that the plasma source comprises: a coil or antenna 36; and a power source operable to apply a high frequency power to a first end of the coil or antenna so as to generate the plasma in the chamber, wherein the power source comprises a first power supply 40 operable to supply a first power with a first frequency and a second power supply 48 operable to supply a second power with a second frequency.

Concerning claims 5 and 12, note that a second end of the coil or antenna is grounded through node 38.

With respect to claims 6 and 13, note the presence of a biasing electrode 44 provided between the coil or antenna and the portion of the container and a second power source 57 to apply a second high frequency power to the biasing electrode.

Furthermore, with respect to claim 7, note that a device can be formed by the apparatus of fig. 1.

Claims 1-3 and 7-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Maeda et al., U.S. Patent 6,624,084.

Maeda et al. shows the invention as claimed including an apparatus for plasma doping, comprising: a vacuum container defining a chamber therein, the container having a portion made of a dielectric material such as quartz (see col. 9-lines 2-3) and bearing an impurity to be doped in a substrate provided in the chamber (see conductive member of fig. 1B which can be a material such as aluminum); and a plasma source 11 operable to generate a plasma in the chamber by forming an electric field through the

Art Unit: 1763

portion of the container, so as to inherently cause ion in the plasma to impinge against the portion of the container to draw the impurity out of the portion of the container into the chamber, wherein the impurity can comprise aluminum (see fig. 1B and 3 and their description).

Concerning claims 2-3 and 9-10, note that the impurity is deposited on a surface of the portion of the container and is provided inside the portion of the container.

Furthermore, with respect to claim 7, note that a device can be formed by the apparatus of fig. 1B and 3.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1763

Claims 4-6 and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maeda et al., U.S. Patent 6,624,084 in view of Baldwin, Jr. et al., U.S. Patent 6,280,563.

Maeda et al. is applied as above but does not expressly disclose the claimed power source and a biasing electrode provided between the coil and the antenna. Baldwin, Jr. et al. discloses a power source applied to a coil wherein the power source comprises a first power supply 40 operable to supply a first power with a first frequency and a second power supply 48 operable to supply a second power with a second frequency. Furthermore, Baldwin, Jr. et al. also discloses a biasing electrode 44 provided between the coil or antenna and the portion of the container (see fig. 1 and its description). In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the apparatus of Maeda et al. so as to include the power source and biasing electrode of Baldwin, Jr. et al. because such a power source allows for greater control over the process conducted within the apparatus and the presence of the biasing electrode allows for effective inductive coupling of the plasma in the processing chamber.

Response to Arguments

Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 1763

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Luz L. Alejandro whose telephone number is 571-272-1430. The examiner can normally be reached on Monday to Thursday from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
